## Oscillating Haul-Off

### Horizontal and vertical haul-offs...

*SK-Machinery® offers a wide range of products and machinery including haul-offs. We always work closely with our customers to make sure that we meet the exact specifications and design wanted by the customer.*

*We offer 360° oscillating haul-offs which is a key factor in minimizing problems with creases in blown film.*

*Our effective oscillating haul-off helps smoothing wrinkles over turning bars without damaging the film. This results in a very high quality of the finished roll.*

#### **BENEFITS OF THE SK-MACHINERY OSCILLATING HAUL-OFFS**

- Minimal creasing/wrinkling of the film due to randomizing of the bubble
- Smoothing of the film resulting in improved roll geometry of the finished roll

#### **FEATURES OF THE OSCILLATING HAUL-OFFS**

- Sturdy frame structure for stable and secure operation
- Special turning bars for increased air volume
- Air blowers to form an air cushion on the turning bars to avoid friction between the bars and the film
- Special spread rollers
- Can be mounted with collapsing frames
- Optional roller quality: carbon fibre rollers, aluminium
